(51) Int.Cl.2016.01: B 21B 37/00, B 21B 37/20, B 21B 39/08, B 21B 37/50, B 21B 37/24

(57) Abstract:

Method for the production of flat metal products, in particular coils of strip, in endless and/or semi-endless mode, in which a metal product is continuously fed to a rolling mill consisting overall of at least 4 stands, in which the rolling stands are, in sequence, roughing stands (18a, 18b, 18c), and finishing stands (21 a, 21 b, 21 c, 21 d, 21 e), wherein it is provided to perform a flying gauge change, namely a change of thickness without interrupting the rolling process, of the metal product exiting from the rolling mill. At least the rotation speed of the rollers of the first stand (18a) of the rolling mill and their gap are not modified during the flying gauge change of the strip. The transition from the current thickness to the subsequent thickness occurs by applying a new set-up of parameters, for example gap between the rollers, speed of the rollers and inter-stand tension, to all the rolling stands involved in the flying gauge change. The number of stands involved in the flying gauge change, starting from the last stand (21 e) of the finishing stands, is obtained taking into account the distribution of the rolling force of each stand, so that the new distribution of forces due to the thickness change does not cause the value of the rolling force of any stand whatsoever to exit from an acceptable tolerance range.

(51) Int.Cl.: G 06F 17/30, G 06Q 30/06, G 06Q 30/00

(57) Abstract: An electronic computer-implemented and interactive platform is described, which permits the offer, sale, and distribution of diamonds by sellers to purchasers and, as a result, into the overall diamond marketplace. Each diamond is scanned in order to create a three-dimensional (3D) virtual model that can include images and/or other data that digitally identifies that diamond, providing a "fingerprint" of the diamond. The purchaser may have highly confidential and proprietary information that specifies the critical details of its manufacturing process for each type of cut of polished diamond, referred to as polished diamond parameters (PDPs). A planning system is used to offload time consuming and computationally expensive planning operations from the manufacturer (or other purchaser), and does so prior to a purchase. The planning system and a matching process are used by the platform to enable the data in each PDP file to be applied to the 3D virtual model of each individual diamond.

(57) Abstract: In preparation for directional drilling, a wedge supported distally ahead of a tubular drill string is advanced along a parent hole. The wedge is connected to the drill string by a rigid link that extends along a central longitudinal axis through an annular cutting head. The wedge may be connected to the drill string via an inner dropper mechanism that can be engaged by a wireline lifting system. After locking the wedge at a kick-off point in the hole at a desired azimuth, the connection of the link is broken. The dropper mechanism can then be retrieved and replaced by an inner core tube, without moving the drill string. The drill string is then advanced to drill a daughter hole that branches from the parent hole on the azimuth determined by the wedge. Advantageously, there is no need to withdraw the drill string before drilling the daughter hole can commence.

(51) E 04D 3/00(2006.01)

(57) Roofing materials such as tiles, GI, waste products such as bamboo, coconut etc., coated iron, and fiberglass are basically major components that are used. However, they have challenges in allowing sufficient sunlight since they are either opaque or translucent in nature. While on the other hand PET plastics have become increasingly available within our environment as landfills and this pose threat to life and environment. Therefore, this is curbed through converting the pet plastic bottle to roofing sheets through, the processes such as feeding, filtering unwanted materials, forming into flat sheet, heating and forming into roofing sheet and cooling to ambient temperature and cutting into desired dimensions. These sheets can be applied to rooftops to allow adequate sunlight though in either condition of the day. This will allow plenty of light inside the warehouse and different forms of house structure.

(54) Title: KEG BARREL CAP

(57)

This proposed utility model uniquely addresses the central problem of the **irregular and unlawful access and syphoning of the contents of Keg barrels**. This exposes consignors/consignees to huge financial losses **noting that such discoveries oftentimes occur when it's too late thus making it harder to identify the likely perpetrators**. For a long time, this problem has gone unchecked until now. **The Keg Barrel cap provides a new and industrially applicable tamper-evident functionality meaning that any attempts to unlawfully and irregularly access the contents of the Keg barrel shall be easily detectable by the consignor/consignee**. This shall:

1. Provide **early detection and alert** consignors/consignees in instances where the contents of the Keg barrel have been unlawfully and irregularly accessed and possibly syphoned and depleted; and
2. **Deter persons** from attempting to unlawfully and irregularly access and syphon the contents of the Keg barrels.

The enclosed representations and illustrations shall provide further insight into the functionality and design of the Keg Barrel Cap.

(54) Title: A DEVICE USED FOR SQUEEZING WATER FROM A MOP

(57) The technical field for this item is a metal stand for squeezing and drying a round cloth mop. This device used for squeezing water from a mop is made from metal. Different sizes of round metal rods are welded together to make a complete stand and then different sizes of flat metal of the same width is welded together to make a basket that is used for squeezing water from the cloth mop. The flat metal making the basket is properly spaced for the water to drain through and also the spacing is well measured to prevent the cloth from the mop head from passing through to touch the water from the bucket/basin. This device is an independent item that will be used as an independent unit that is not restricted to any bucket or basin. Any person with a bucket or basin can use this device by pouring water in the bucket/basin and dipping this device to use it to drain the water from the mop head. The material and design make it long lasting and cannot give in to breakage when human pressure is put when squeezing the mop head. This device will help in reduction of germs coming into contact with the hands during cleaning.
