The present invention discloses production of Bioethanol energy. It describes a process of sustainable renewable Bioethanol production from *Dracaena steudneri* plant, comprising steps of collection of biomass raw material, pre-treatment of the biomass, thermal extraction of the sugars, fermenting the sugars, ethanol extraction and elimination of water to recover the Bioethanol liquid. In a similar embodiment, the invention provides process, wherein the raw material is a cellular *Dracaena* plant in the proportion of between 20-70% by weight and pre-treatment of the biomass is designed to expose the cellulose and hemicelluloses component. Whereas the thermal extraction of the sugars is from the cellulose and hemicelluloses component, the fermenting the sugars are formulated to produce ethanol. The ethanol extraction is by fractional distillation and the dehydration is designed to eliminate water from the Bioethanol.

(57) Abstract: Novel 4-amino-6-(heterocyclic)picolinic acids and their derivatives and 6-amino-2-(heterocyclic)pyrimidine-4-carboxylates and their derivatives are useful to control undesirable vegetation. The occurrence of undesirable vegetation, e.g., weeds, is a constant problem facing farmers in crops, pasture, and other settings. Weeds compete with crops and negatively impact crop yield. The use of chemical herbicides is an important tool in controlling undesirable vegetation.

(51) Int.Cl.: F 03B 17/00

(57) Abstract: This invention relates to a submersible hydroelectric generator apparatus (1) and a method of evacuating water from such an apparatus. The method of evacuating water from a submersible hydroelectric generator apparatus (1) comprising the steps of pressurizing a fluid supply in the submersible hydroelectric

generator apparatus using the water flowing into the apparatus and thereafter using the thus-pressurized fluid supply to evacuate the water from the apparatus. Additional pressurized fluid is supplied to provide a pressurized fluid supply with sufficient pressure to expel the water from the apparatus. The apparatus (1) can be used in a grid connected electricity generating system or indeed in a smaller scale implementation such as in a single building or group of buildings to provide electricity to those buildings. The invention overcomes problems with prior art devices by evacuating water from the apparatus in an efficient manner.

(54) Title: MULTI-LEVEL GAS SCRUBBER WITH MULTIPLE FLOODED SCRUBBER HEADS
(51) Int.Cl.: B 01D 47/02
(57) Abstract: The present invention relates to a wet scrubbing head design whose horizontal orientation and flooded operating characteristics allow complete wet scrubbing at multiple interaction zones each with different neutralizing reagents. The capacity for multiple scrubbing zones improves overall pollutant removal efficiency by adding polishing interaction zones for particulate and acid gas removal systems or by broadening the range of pollutants being removed by operating with a different neutralizing solution or a combination of these operating conditions. The flooded head design approach allows a single scrubber to accomplish high levels of removal efficiency for multiple pollutants which reduces cost, and footprint interaction complexities of the multiple devices it replaces. Flooded head scrubbers have application in combustion flue gas pollutant removal and in chemical and industrial applications that generate dust, odors and acid gases.

(57) Abstract: Lignocellulosic biomass (11) is processed to produce organic chemicals by (a) subjecting the biomass to a first hydrolysis (14) to hydrolyse hemicellulose, to form a liquid component comprising the products of hemicellulose hydrolysis in solution, and a solid component comprising cellulose and lignin; (b) then subjecting the solid component to a second hydrolysis (20), so as to hydrolyse cellulose and vaporise the resulting products of cellulose hydrolysis; and (c) then condensing (22) the resulting vapours to form an aqueous solution (25) containing the products of cellulose hydrolysis. After the first hydrolysis (14) and before the second hydrolysis (20), the process also comprises subjecting the solid component to a washing step (16). In this washing step (16) the solid component is washed with the aqueous solution (25) that contains the products of cellulose hydrolysis. Hence the resultant solution contains the products of both the first and the second hydrolysis steps (14, 20).

(51) Int.Cl.: H 03M 7/42, H 04N 7/50, H 04N 7/26

(57) Abstract: A decoder for decoding a video from a data stream into which horizontal and vertical components of motion vector differences are coded using binarizations of the horizontal and vertical components is described, the binarizations equaling a truncated unary code of the horizontal and vertical components, respectively, within a first interval of the domain of the horizontal and vertical components below a cutoff value, and a combination of a prefix in form of the truncated unary code for the cutoff value and a suffix in form of a Exp-Golomb code of the horizontal and vertical components, respectively, within a second interval of the domain of the horizontal and vertical components inclusive and above the cutoff value, wherein the cutoff value is two and the Exp-Golomb code has order one. An entropy decoder is configured to, for the horizontal and vertical components of the motion vector differences, derive the truncated unary code from the data stream using context- adaptive binary entropy decoding with exactly one context per bin position of the truncated unary code, which is common for the horizontal and vertical components of the motion vector differences, and the Exp-Golomb code using a constant equi-probability bypass mode to obtain the binarizations of the motion vector differences. A desymbolizer is configured to debinarize the binarizations of the motion vector difference syntax elements to obtain integer values of the horizontal and vertical components of the motion vector differences; A reconstructor is configured to reconstruct the video based on the integer values of the horizontal and vertical components of the motion vector differences.

(51) Int.Cl.: G 03G 7/00, H 03G 3/24, H 04B 1/64, G 10L 21/034

(57) Abstract: Embodiments are directed to a companding method and system for reducing coding noise in an audio codec. A compression process reduces an original dynamic range of an initial audio signal through a compression process that divides the initial audio signal into a plurality of segments using a defined window shape, calculates a wideband gain in the frequency domain using a non-energy based average of frequency domain samples of the initial audio signal, and applies individual gain values to amplify segments of relatively low intensity and attenuate segments of relatively high intensity. The compressed audio signal is then expanded back to substantially the original dynamic range that applies inverse gain values to amplify segments of relatively high intensity and attenuating segments of relatively low intensity. A QMF filterbank is used to analyze the initial audio signal to obtain a frequency domain representation.

(51) Int.Cl.: F 03B 11/00, F 03B 3/08, F 03B 17/06, F 03B 13/00

(57) Abstract: This invention discloses a prime mover, preferably an electro-mechanical device (Fig. 2) with an end goal for generating electricity, which can operate even when the sun light based solar energy is not available. It comprises a wheel structure imparted with multiple arms (22) and arm loads (24) along with the feeder box (38) to cycle through the side tank (30). The feeder box regulates the arm movement within the feeder box (38) using the treaded guides (45). Due to the buoyant and gravitational forces the unbalanced arm loads (24) cause the imbalance in the wheel structure and rotate the entire wheel structure along the guided track. This prime mover can be used primarily for generating electricity by connecting it to an electrical generator (60).

This proposed utility model uniquely addresses the central problem of the **irregular and unlawful access and syphoning of the contents of Keg barrels**. This exposes consignors/consignees to huge financial losses **noting that such discoveries oftentimes occur when it's too late thus making it harder to identify the likely perpetrators**. For a long time, this problem has gone unchecked until now. **The Keg Barrel cap provides a new and industrially applicable tamper-evident functionality meaning that any attempts to unlawfully and irregularly access the contents of the Keg barrel shall be easily detectable by the consignor/consignee.** This shall:

1. Provide **early detection and alert** consignors/consignees in instances where the contents of the Keg barrel have been unlawfully and irregularly accessed and possibly syphoned and depleted; and
 2. **Deter persons** from attempting to unlawfully and irregularly access and syphon the contents of the Keg barrels
- The enclosed representations and illustrations shall provide further insight into the functionality and design of the Keg Barrel Cap.

(54) ROYAL BEESWAX EXTRACTION PROCESS

(51) C 11B 11/00(2006.01)

(57) The present invention discloses to a process for extracting royal beeswax from beehives. The process comprises steps of hive inspection and identification of combs, segregation and protection of the combs, low-temperature extraction, filtration, purification, quality testing and certification of premium grade. Advanced imaging technology, such as infrared scanning, aids in accurate identification. The identified Royal Beeswax combs are then segregated and protected to prevent contamination, preserving their unique properties. The wax is subsequently subjected to multi-stage filtration and purification, ensuring the removal of impurities and unwanted residues.  An illumination device, which comprises a light source and a battery to power the light source, provides improved light output without the need for complicated and therefore expensive optical arrangements by including a nonimaging light guide which collimates and optionally diffuses light emitted by the light source. In a particular embodiment of the invention these improvements are implemented in a multipurpose solar light which includes a solar panel, wherein the battery stores energy generated by the solar panel. The illumination device may comprise a casing having a front casing portion and a rear casing portion, wherein the nonimaging light guide is integrally formed with the front casing portion. The nonimaging light guide may have a shape comprising two conical frusta. Furthermore, the nonimaging light guide may comprise a recess in which the light source is located, the recess being larger than the light source such that there is a gap which permits airflow and in turn removal of heat from the light source as well as improved optical coupling.

12.8 Removal

Section 23 of the Trade Marks Act provides that registration of a trade mark in Kenya shall expire after a period of ten (10) years. The Act also provides that the proprietor of a registered trade mark may make an application for

renewal of the trade mark upon completion of the prescribed Form TM 10 and payment of the prescribed renewal fee.

Rule 65 of the Trade Mark Rules provides that where no application for renewal of a registered trade mark is received upon expiry of the ten year period, the Registrar of Trade Marks shall notify the proprietor of this fact. Where no application for renewal of the registered trade mark is received within a period of **sixty (60) days** from the date of the notice for renewal by the Registrar, rule 67 of the Trade Mark Rules requires the Registrar of Trade Marks to publish this fact.

In accordance with the above provisions, the Registrar of Trade Marks hereby notifies the public that the proprietors of the trade marks indicated below were duly notified and that they did not file applications for renewal of their respective trade marks.

In accordance with the provisions of rules 67 and 68 of the Trade Mark Rules, the public is hereby notified as follows:

- (a) Where the proprietor of a registered trade mark makes an application for renewal of a mark that has been published herein and pays the renewal fee together with the additional prescribed late renewal fee **within thirty (30) days** from the date of this publication, the trade mark shall be renewed and shall not be removed from the Register of Trade Marks;
- (b) Where no application for renewal of a trade mark published herein is received **within thirty (30) days** from the date of this publication, the trade mark shall be forthwith removed from the Register of Trade Marks; and

Once the trade mark is removed from the Register of Trade Marks, the proprietor may thereafter make an application for renewal of the mark upon payment of the prescribed renewal fee together with the additional prescribed restoration fee. The trade mark shall then be restored to the Register of Trade Marks upon the Registrar of Trade Marks being satisfied that it is just to do so and upon imposing such conditions as the Registrar may deem fit.
