(54) Title: MANHOLE PROTECTOR GRID

(51) Int.Cl.2016.01: E 02D 29/14, E 02D 29/12

(57) Abstract: Disclosed in the present invention is a manhole protector grid device (40) consisting of a barrier member that may be shaped so as to be receivable within a manhole (1a) with little clearance so as to reduce the risk of a foreign object passing between an edge of the barrier member and an inner surface of the manhole. The device consists of a horizontal barrier member (42) with a supporting arrangement consisting of a plurality of legs (50) attached to horizontal members (60) beneath the horizontal barrier member (42). The lower ends of the legs (50) may be inclined in order to correspond to the inclination of the benching (14) as in Fig. 2 below. An access hatch (46) may be provided in the barrier member (42) whereby access to the pipeline can be gained. A closure element 48 may be provided to close the access hatch. All components of this device are made from durable synthetic plastic material which is inert and non-corrosive.

(54) Title: PROCESS AND TECHNIQUE FOR OPPORTUNISTIC USE OF BROADCAST TERRESTRIAL TV RECEIVER HOLES BY COGNITIVE RADIO

(51) Int.Cl.2016.01: H 04N 21/24, H 04W 16/14

(57) Abstract: The present invention discloses a process and technique that employs a cognitive radio that continuously monitors the digital video broadcasting terrestrial (DVB-T) TV channels. The said invention is crafted in such way that it operates when none of the DVB- T TV receivers, within a cell of concern, are tuned-into in order to allocate those channels to an opportunistic service provider whose licensed network is overwhelmed by extra traffic. This novel approach is different from the state of the art approach where the cognitive radio monitors the content on the DVB- T TV transmitter channels in order to allocate the channels that do not have transmitter content to an overwhelmed service provider. This invention implies that the DVB-T TV receivers should have the ability to continuously submit the channels that they are tuned into to the cognitive radio.

(54) Title: DIRECT AIR CAPTURE MACHINE AND PROCESS THEREOF

(51) Int.Cl.2018.01: B 04B 5/10(2006.01)

(57) Abstract: The present invention discloses a direct air capture machine, comprising a damper plate assembly 1, top plate fastened onto the body frame, centrifugal fans 3, sorbent chambers 2, sorbent powders and heat exchanger/radiator 2c-2e, plenum airspace and O-rings for airtightness. The said components are designed to ensure the movement of the damper plates with the aid of an O-rings for airtightness and additionally ensure airtightness of the system. The direct air capture (DAC) machine employs temperature swing adsorption and desorption processes for capturing and releasing CO2 to regenerate the sorbent. The machine uses a solid powder sorbent chemical filter that chemically combines and selectively capture CO2 from atmospheric air in a reversible manner, thus removing CO2 emissions.

(54) Title: MONITORING SYSTEM FOR ELECTRICAL DISTRIBUTION NETWORK

(51) Int.Cl.: H 02J 3/00

(57) Abstract: A monitoring system for electrical distribution networks, comprising at least one configured ring-main-unit (110); at least one configured feeder remote terminal unit (120) coupled to the configured ring-main-unit over a wireless network to send and receive SMS from the configured Ring main unit (110); a server grade computer (150) coupled to the at least one configured feeder remote terminal unit (120) and a supervisory control and data acquisition system (SCADA)(160) connected to the server grade computer (150) via at least one communication protocol; the configured feeder remote terminal unit (120) being programmed to determine real time of the SMS receipt by sending a query to a network time protocol server. The invention further relates to a process of monitoring electrical distribution networks.

(51) Int.Cl.: F 02N 11/04, H 02K 29/03, H 02K 7/00, H 02K 21/22

(57) Abstract: Provided is an engine unit that achieves improvement in both engine startability and vehicle mountability without use of a swing-back function and a decompression function, and, when used in combination with the swing-back function and/or the decompression function, achieves further improvement in the engine startability and the vehicle mountability. An engine unit mounted to a vehicle includes a starter motor. A flywheel provided in the starter motor includes magnetic pole faces that are provided on inner circumferential surfaces of permanent magnet parts with respect to a radial direction of the starter motor. The magnetic pole faces are arranged side by side in a circumferential direction of the starter motor. The number of the magnetic pole faces is more than 2/3 of the number of slots. At least at a time of starting a four-stroke engine body, a control device changes a current supplied to a winding of each phase, to thereby enable the flywheel to rotate with overcoming of a high-load region.

(54) Title: COOLING DEVICE

(51) Int.Cl.: H 02J 3/14, F 25B 27/00, F 25D 29/00

(57) Abstract: The invention relates to a cooling device 1, in particular a freezer 2, having a closable cooling space 3, an electrically operated cooling circuit, and preferably a cold accumulator 4, wherein the at least one closable cooling space 3 and the cold accumulator 4 can be cooled by the electrically operated cooling circuit. The invention is characterized in that the cooling device has a current distributor 5 for distributing electric power of at least one regenerative current source 6 to an electrically operated cooling circuit of the cooling device 1 and to at least one further electric consumer 7. Moreover, the current distributor 5 has an automatic control with an arithmetic unit 23, a memory 24 as well as a priority logic. The priority logic in case of lacking electric power of the at least one regenerative current source 6 first of all shall supply the electrically operated cooling circuit of the cooling device 1 with current.

(57) Abstract: Magnetic resonance (MR) apparatuses, systems and methods for analysing a material. The magnetic resonance apparatuses include a primary loop defining an aperture that the material being analysed can pass through where the primary loop includes at least one pair of electrically conductive segments. The magnetic resonance apparatus also includes a pair of capacitance units corresponding to each pair of electrically conductive segments. Each capacitance unit is conductively connected to two adjoining conductive segments in series so that the primary loop forms a circuit for a radio frequency (RF) current. The primary loop is adapted to: conduct the RF electrical current so that the RF electrical current is predominantly in-phase over the entire primary loop. The magnetic resonance apparatus further includes: a pair of secondary coils corresponding to each pair of capacitor units, electrically conductively isolated from the primary loop. Each secondary coil is oriented to be magnetically coupled to the primary loop such that each secondary coil is capable of exciting RF voltages in the primary loop that are predominantly in-phase with each of the RF

voltages excited by the other secondary coils. The magnetic resonance apparatus also includes a primary shield encompassing the primary loop and secondary coils for shielding electromagnetic radiation, the primary shield adapted to allow the material to pass through the aperture defined by the primary loop unobstructed.

(57) Abstract: The present invention relates to a water-processing system configured to produce purified waste water. The system comprises an inlet for waste water, one or more biological water treatment units, and an outlet for purified water. The one or more biological water-treatment units are fluidly connected to the inlet and the outlet. Each of the one or more biological water-treatment units comprises: an inlet for receiving water to be treated, a reactor, an outlet for treated water, and ventilation means configured to provide ventilation to the reactor. The reactor is divided into two or more compartments by one or more screens. Each compartment is in fluid communication with the ventilation means, and comprises a biofilm on one or more surfaces. The reactor is configured to expose at least a portion of the waste water to the biofilm in the presence of air supplied by the ventilation means.

(51) Int.Cl.: H 04L 29/06, H 04W 12/02

(57) Abstract: Techniques for providing privacy features in communication systems are provided. For example, a message may be provided from user equipment to an element or function in a communication network that comprises one or more privacy indicators, where privacy features for processing the message are determined based on the privacy indicators. The message may comprise an attach request comprising a subscription identifier for a subscriber associated with the user equipment, with the privacy indicators comprising a flag indicating whether the subscription identifier in the attach request is privacy-protected. As another example, the element of function in the communication network may determine privacy features supported by the communication network and generate and send a message to user equipment comprising one or more privacy indicators selected based on the determined privacy features. The privacy indicators may comprise an indication of whether the communication network is configured for handling privacy-protected subscription identifiers.

(54) Title: METHOD OF PROTECTING AN OBJECT AGAINST FIRE AND FIRE PROTECTIVE COVERING FOR AN OBJECT

(51) Int.Cl.: H 01B 7/295, F 16L 57/04, A 62C 2/06

(57) Abstract: The invention relates to a method of protecting an object (1) against fire. An endothermic material (2) is arranged around the object (1), and then an outer metal-containing cladding (5) is arranged so that it covers at least a part of the endothermic material (2). The endothermic material (2) is provided as a tape (3) which is applied by helically winding the tape (3) in an overlapping manner resulting in a stepped outer surface (6) facing towards the outer cladding (5). The outer cladding (5) comprises metal, in particular is made of metal. The stepped outer surface (6) results in air cavities (7) being formed underneath the outer cladding (5). When the object (1) is exposed to a fire, such small air cavities (7) will allow for a slight swelling of the endothermic material (2) that will, as a consequence of the fire, react and release water directly to the outer cladding (5) from underneath and thereby provide cooling thereof.

(54) Title: METHODS OF TREATING HEART FAILURE WITH REDUCED EJECTION FRACTION WITH DAPAGLIFLOZIN

(51) Int.Cl.:

(57) Abstract: The present disclosure is directed to methods of treating patients with heart failure with reduced ejection fraction (HFrEF), with and without Type 2 diabetes, with an SGLT2 inhibitor, such as dapagliflozin. The methods disclosed herein can reduce the risk of a composite outcome of a first episode of worsening heart failure (hospitalization for heart failure or an urgent heart failure visit) or death from cardiovascular causes. Each of the three components of this composite outcome can also be reduced, as well as the total number of heart failure hospitalizations and deaths from cardiovascular causes. SGLT2 inhibitors, such as dapagliflozin, can also reduce a worsening of heart failure symptoms. The methods disclosed herein can also improve heart failure symptoms, health status, and quality of life.

(51) Int.Cl.: C 12N 5/095, A 61K 39/00

(57) Abstract: Disclosed herein are methods of treating minimal residual cancer in a subject. The methods involve contacting disseminated cancer cells (DCCs) in a subject with a bone morphogenic protein 7 (BMP7) derivative protein, where the contacting induces or maintains dormancy in the contacted DCCs of the subject to treat minimal residual cancer in the subject. Also disclosed are methods that involve contacting DCCs in a subject with a protein kinase RNA-like endoplasmic reticulum kinase (PERK) inhibitor selected from LY2, LY3, and LY4, where said contacting eradicates DCCs in the subject to treat minimal residual cancer in the subject.

(57) Abstract: An interworking function in a core network system, such as a 5G core network, attempts to establish a secure association with user equipment (UE) in an untrusted access network. When the secure association is not accepted by the 5G core network, the UE receives from the core network a response including a message type indicating that Non-3GPP access to the 5G core network is not allowed. Upon receiving the response message, the UE ends the session by sending a 5G- Stop message formatted in an Extensible Authentication Protocol (EAP) response. The EAP-Response/5G-Stop message includes a message-id field with a 5G Stop value.

(54) Title: DEVICE AND METHOD FOR PROCESSING OF SPRAY CANS

(51) Int.Cl.: B 09B 3/00, B 65B 69/00

(57) Abstract: Device for processing of spray cans, the device comprising a first space, separating means for separating spray cans in the first space, a second space, first transport means for transporting gas from the first space to the second space, and compressing means for compressing gas in the second space, characterized in that the device also comprises second transport means configured and suitable for transporting heat, released during compressing of the gas, from the second space to the first space. The second transport means for instance comprise here a conduit for having a fluid, preferably a coolant, flow therethrough. Also method for processing of spray cans by means of such a device. The term 'space' is understood in the context of the invention to mean 'a determined part of the device'. When process parameters such as heat flow, gas flow, temperatures and pressures are set correctly, solid material, active substance and propellant are discharged separately, and can then separately be further processed, destroyed or reused. Heat which is released during the compressing / condensing of gas in the second space is used to compensate for cold which is released during expansion of gas and/or evaporation of liquid in the first space. Thus it is brought about that the first space does not become too cold and the second space does not become too hot, while the whole process is energy-efficient.

(51) Int.Cl.: B 01J 20/00, G 01N 33/50, C 12M 1/00, C 12Q 1/24

(57) Abstract: A system for clarifying a cell culture harvest solution, including target molecules and dynamic filter media. A filtration vessel includes a flexible liner and at least one filter having a surface on which the dynamic filter media accumulates into a cake. The cake and filter during filtration operation permit a filtrate including target molecules to pass therethrough while preventing unwanted solid materials from passing therethrough. A backflush source includes a backflush fluid and is fluidly connected to the filtration vessel via the at least one filter. The backflush source, during backflush operation, is adapted to supply backflush fluid back through the at least one filter for removing the cake formed on the filter. Related systems and methods are also disclosed.

(51) Int.Cl.: H 04B 7/08

(57) Abstract: Embodiments of the present invention provide an antenna switching method and device. The method comprises: when a mobile terminal is in a call state of a first antenna, respectively detecting a first received signal strength of the first antenna and a second received signal strength of a second antenna at preset time intervals; and if the second received signal strength is greater than the first received signal strength, and the difference between the second received signal strength and the first received signal strength is greater than a first preset threshold, switching the second antenna as a call antenna, using the switched call antenna as the new first antenna, and re-performing the step of detecting the first received signal strength of the first antenna and the second received signal strength of the second antenna at preset time intervals. According to the embodiments of the present invention, it can be ensured that the call antenna during a call is an antenna having strong signal transmitting and receiving performances, thereby ensuring a high call quality.

(57) Abstract: A network-connected flow meter includes a latching structure for securely engaging a tank of a compressed gaseous hydrocarbon. An actuated valve is configured to open and close a flow of gas from the tank. An electronic controller controls the latching structure and the actuated valve upon receiving instructions from an external source. A digital flow meter monitors a rate of flow of the gas from the tank and supplies a flow reading to the electronic controller. A mobile communications radio receives the instructions from the external source and provides the received instructions to the electronic micro controller.

 (57) Abstract: A fuel meter (10) uses a residual amount sensor (11) to detect the residual amount of fuel every 100 ms, and successively calculates an average value of the residual amount in the present detection and the residual amounts in the past prescribed times of detection. Each time a difference between the average value in the present calculation and the average value in the previous calculation is greater than a prescribed value, the fuel meter (10) corrects the average value in the previous calculation such that the difference matches the prescribed value. The server device (40) successively calculates a difference obtained by subtracting the corrected average value in the previous calculation after the correction from the average value in the present calculation after the correction, and successively calculates a summation value by summing the difference in the present calculation and differences in the calculations in the past certain period (t-s). The server device (40) detects fuel theft on the basis of the summation value.

(54) SMART FARM TECHNOLOGY
(51)
(57)

The present inventions relate to a technology that incorporates the internet of things (IoT) to help in optimizing agricultural productivity to reduce food insecurity in arid and semi-arid-lands (ASAL). Specifically, temperature, humidity and pH sensors are used to determine soil conditions including temperature, soil moisture and levels of acidity. A GSM/GPRS module is used to realize the communication between the system,

sensors and cloud storage. Machine Learning (ML) is used to analyse the data collected and develop a prediction model useful for the determination of the right crop for a given area/land in a given season. The system has a valve to automatically control water for irrigation thus providing optimal conditions for crop production. Mobile and web applications provide the user/farmer with periodic information about the farm and guide on the suitable crops for a given season. The technology helps to improve farm productivity through engineered decision-making and the use of limited resources thus saving time and money.

(54) RADIO WAVE TECHNOLOGY FOR CONTROLLING INDUSTRIAL OPERATIONS

(51)

(57)

The present invention relates to technology for controlling industrial operations as a way of improving the safety of the workers and the machinery in various industrial sectors such as mining so as to increase the overall production of the company and reduce occupational health costs and equipment durability. Specifically, the invention involves the use of a transmitter that emits radio waves when triggered by a switch, the radio waves are received by the receiver module which energizes the industrial relays that are used to control the conveyor belt systems, high voltage circuits, heavy ventilators, and starting or stopping of heavy industrial machines from a distance. An Arduino board (Arduino nano) is programmed to control the operations of the system and for data acquisition. The system while in operation is able to remotely control the operations of a machine located in a radius of 1 km from the operator.

(54) SMART MINIATURE BIOGAS SYSTEM

(51)

(57)

The present invention relates to a technology for incorporating sensors and a controller in a miniature biogas system to help meet domestic energy needs, recycle organic waste as well as obtain quality bio-fertilizer as input for agricultural farms thus leading to a circular economy. This will reduce the over-reliance on charcoal and the use of petroleum energy both of which are a threat to the environment and human health. Specifically, the invention relates to the miniaturizing of the bio-digester that allows scalability owing to its small size, and use of locally available materials. This makes the system relatively cheap and thus affordable to many small households that are currently not able to purchase the existing bio-digesters. The system has an automated stirring mechanism using a DC motor for improved safety and efficiency at home and employs the internet of things (IoT) for monitoring and real-time management of the processes that are ongoing in the bio-digester sensors to ensure that the processes are optimized for maximum gas production. A heating element is incorporated into the system to operate at optimal temperature for maximum gas production. A temperature sensor is used to obtain the actual temperature of the bio-digester and compared to the set temperature. Any deviation of the temperature will send a signal to the heater to either go ON or OFF to bring the bio-digester temperature back to the set temperature for optimal gas production. The system incorporates solar power to drive the operations which is friendly to the environment and abundant in our region.

(51)

(57) Disclosed in the present invention is a transducer apparatus for conversion of energy from chemical to mechanical and then to electrical energy by applying the principle of reaction of elements in the field of chemistry. The apparatus comprises a container, dynamo and pure sodium metal reactants. The chemical energy found in chemicals is converted into electrical energy. The conversion of the energy is achieved when pure sodium metal (in powder form) is reacted with water in an enclosed container. Also disclosed is a method of conversion of chemical energy into mechanical and later in electrical energy using transducer apparatus, comprising specific steps.

(57) This invention discloses a sanitary pad made from banana fibers with a layered construction comprising of the top layer, second layer, third layer and bottom layer, such that the top layer is soft and comprises breathable banana fiber cloth and prevldes a comfortable and gentle surface for the skin. This invention further discloses a sanitary pad made from banana fibers characterized in that the second layer is highly absorbent banana fiber with numerous channels and the channels provide effective liquid distribution and retention. The third layer of the pad is leaking proof banana fiber sheet that prevents any liquid from passing through the pad and prevents any liquid from passing through the pad, while the bottom layer is adhesive and consists of a backing that keeps the pads securely in place.

It introduces a user-centric platform with secure account management, family health tracking, and an innovative integration of machine learning and AI. The system analyzes user-entered health data, offering personalized nutrition and exercise recommendations, accounting for external factors like weather. The absence of a comprehensive health tracking method often leads to issues such as inefficient medication management, missed preventive care, and increased healthcare costs. The invention tackles these challenges by incorporating features like account linkage with health care providers, printable logs, and continuous learning algorithms. Notably, the AI-driven recommendations consider individual health profiles and adapt to changing needs. The system prioritizes privacy, security, and user feedback.

Specifically, the load cells are used to determine the loadings of the conveyers, temperature sensors are used to determine bearing failures, and a controller whose variation in resistance is used to determine the actual power factor of the system. A current transformer indicates the current in the motors, and data from variable frequency drive is harnessed to alter the motor speed remotely for optimal operations. The data from a unit of programmable logic controls (PLCs) of the system are retrieved using an ethernet cable to a microprocessor which serves as data acquisition. For visualization, the microprocessors are interfaced with Lab VIE W which serves as the graphical user interface (GUI) for the system. The data is further processed to provide useful information to the managers thus preventing theft and mismanagement of the mines .

(57)

The present invention discloses a gastrointestinal nematocide in ruminants comprising bromelain encapsulated in chitosan nano-carriers. In one general embodiment, the said invention describes extraction of bromelain from *Ananas comosus* (pineapple) and purification of mature *Haemonchus contortus* worms (barber's pole worm) from the contents of the abomasum of infected ruminant, preferably goats (African Galla). The said invention provides main constituent components of the formulation as bromelain, 1% tripolyphosphate and chitosan based nano-carrier wherein the said formulation is designed to treat gastrointestinal nematode infestation in percentages of about 22.5 %, 22.5 % and 55 % respectively. Chitosan based nano-carrier is formulated in a nano-formulation means using 1 % tripolyphosphate that is capable of stabilizing bromelain in low pH in the presence of pepsin, characterized in that the said chitosan is able to encapsulate, carry and release bromelain at the target location in extended manner.

The invention refers to a combustion engine fuel saving system that uses Oxyhydrogen (HHO) as a fuel. The system works as fuel combustion in parallel to petrol or diesel to increase the combustion efficiency of a vehicle, generator, boiler or any kind of machinery that uses fuel as its primary energy source. The Oxyhydrogen generator or can be called Hydrolyzer, is a one unit machine that uses purified or distill water as its main input and produces two molecules of hydrogen and one molecule of Oxygen, in its chemical name, Oxyhydrogen or HHO. As an engine kit, the oxyhydrogen generator can be installed on an engine with or without fuel management corrector device called EFIC (Electronic Fuel Injection Corrector).

(54) Title: A Fiber-Reinforced Plastic Rebar for Reinforcing Concrete

(57) This invention relates to a fiber-reinforced plastic (FRP) rebar for reinforcing concrete, utilizing Composite Technology's proprietary mix of raw materials. The rebar comprises 20 percent Polyester or Epoxy Resin and 80 percent Fiberglass or Basalt Fiber, with 100 percent mix additives applied to the resin. The innovative manufacturing process results in a composite material that combines the strength of fiberglass or basalt with the corrosion resistance of polyester or epoxy resin, offering enhanced structural reinforcement for various construction applications.

12.3 Madrid Applications accepted for registration

The following are the marks whose international registration has been notified to Kenya as a designated contracting Party by the International Bureau, World Intellectual Property Organization (WIPO) and which are governed by the Madrid Agreement and the Madrid Protocol. The prescribed period of twelve (12) months and eighteen months (18) respectively for refusal of the marks commences from the notification date indicated herein for each mark.

NOTICE is given that any person who has grounds of opposition to the registration of any of the marks may, in accordance with the provisions of rule 11(1) of the Trade Marks (International Registration) Rules 2003, file a notice of opposition within sixty (60) days from the date of this Journal on form TM. No. 6 (in duplicate) together with a fee of Ksh 5,000/= (Kenyan residents) or US\$ 250 (non residents).

The period of filing the notice of opposition may be extended by the Registrar of Trade Marks as prescribed in the Trade Mark Rules. Any request for such extension should be made to the Registrar before the expiry of the sixty (60) day statutory period.

All the details of the marks advertised herein are available on WIPO's website www.wipo.int/romarin

2. African Regional Intellectual Property Organization (ARIPO)

ARIPO is a regional body established by African governments to have a central office to among other things, process and grant industrial property rights on behalf of member states. ARIPO grants patents, utility models and industrial designs on behalf of Kenya. Currently, ARIPO consists of the following 16 member states; Botswana, Gambia, Ghana, Kenya, Lesotho, Liberia, Malawi, Mozambique, Namibia Sierra Leone, Sudan, Swaziland, Tanzania, Uganda, Zambia and Zimbabwe. Kenyan applicants are required by law to first file with the Institute before filing with ARIPO. ARIPO secretariat is located in Harare Zimbabwe.

The complete fee schedule for ARIPO is available on their website <http://www.aripo.org>. The following are the fees an applicant is required to pay immediately on application.

3. Patent Cooperation Treaty

The Patent Cooperation Treaty (PCT) is an international patent protection treaty consisting of over 140 member states. PCT is administered by the World Intellectual Property Organization in Geneva Switzerland. PCT makes it possible for an applicant to seek patent protection for an invention simultaneously in any of the selected member states by filing one application. PCT is a filing system and does not grant patents on behalf of the member states. Applications must enter national phase in the selected member states. In the national phase, the applicant is required to pay the prescribed national fees in the said member states. Further, in

some member states, a foreign applicant is required to have a resident agent. The PCT fees as of 1st May 2011 are as follows:

Type of fee	Fee		Fee waivers
International filing fee	USD 1, 367 or CHF 1330		90% waiver for a natural person from Kenya
Search fees (only one search authority needs to be selected by applicant)	Austria	USD 2, 443	75% waiver for natural a person from Kenya
